Reasons for Allowance

4. Claims 1-16 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claim 1 recites, A dual feedback control system for maintaining the temperature of an IC-chip near a set-point while said IC-chip dissipates a varying amount of electrical power; said system being comprised of an evaporator for a liquid refrigerant, and an electric heater which has one face that is connected directly to said evaporator and an opposite face for coupling to said IC-chip, an evaporator controller coupled to said evaporator, said evaporator controller including a second feedback circuit means

for passing said liquid refrigerant to said evaporator with a variable flow rate that decreases as electrical power usage in said heater increases, and increases as electrical power usage in said heater decreases.

Claim 16 recites, A dual feedback control system for maintaining the temperature of an IC-chip near a set-point while said IC-chip dissipates a varying amount of electrical power; said system being comprised of a fluid cooled means, and an electric heater which has one face that is connected directly to said fluid cooled means and an opposite face for coupling to said IC-chip, a fluid controller coupled to said fluid cooled means, said fluid controller including a second feedback circuit means for passing said fluid to said fluid cooled means with a variable flow rate that decreases as electrical power usage in said heater increases, and increases as electrical power usage in said heater decreases.

These features in combination with other elements of the claims are neither disclosed nor suggested by the prior art of record.

Claims 2-15 depend from claim 1, they are allowed for the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rockenfeller et al. (US 5,271,239) discloses a "Cooling apparatus for electronic and computer components".

Getchel et al. (US 6,802,368) discloses a "Temperature control system for a workpiece chuck".
